About the University:

The ICAFI University Tripura, (here in after referred as the University) was established in 2004 through an Act of the state legislature (Tripura Act 8 of 2004). The University has been approved by the University Grant Commission under section 2(f) of the UGC Act 1956. The ICAFI University, Tripura is a member of the Association of commonwealth Universities (ACU), London, UK, Association of Indian Universities (AIU), New Delhi, India, the institution of Engineers India), and Association of Management Development Institution in South Asia (AMDISA), Hyderabad. The University has accreditations of the following regulatory authorities: Bar Council of India (BCI), National Council for Teachers Education (NCTE), Distance Education Bureau (DEB) and NAAC.

The University offers Bachelor, Master, And Doctoral programs in management, engineering, information technology, paramedical science, education, law, physical education, humanities and social science and other areas.

The ICAFI University, Tripura has positioned the ICAFI Law School to offer five Year Full-Time integrated BBA-LLB (Hons.), BA-LLB (Hons.), Three Year LLB. and One Year LL.M. Programs with high Academic Standards comparable with those of leading National and International Law Schools in terms of Curriculum, Methodology, Research Oriented internships and Assignments. The programs are thus designed to impart legal knowledge and professional skills to shape the students as future Leaders of the Profession.

The University, with its motto “Meritum Ethicus” strives to develop a new cadre of professionals with high a level of competence and deep sense of moral principles and commitment to the code of professional conduct. The University believes in creating and disseminating knowledge in core and frontier areas through innovative educational programs, research, consulting and publishing, and developing a new cadre of citizens with a high level of competence and a deep sense of ethics and commitment to the code of professional conduct.

About The National Law School of India University :

The NATIONAL LAW SCHOOL OF INDIA UNIVERSITY came into existence through a Notification under the NATIONAL LAW SCHOOL OF INDIA UNIVERSITY Act (Karnataka Act 22 of 1986). It signified the culmination of efforts by the Judiciary, the Bar Council of India, the Karnataka Bar Council, the Bangalore University and the Government of Karnataka to reform legal education and to establish a centre of excellence for legal education and research in India.

The NATIONAL LAW SCHOOL OF INDIA UNIVERSITY was established with a view to cater to the requirements of the legal profession, law teaching and research, and judiciary and it is expected that the students who study in this School will eventually become legal practitioners, law teachers or engage in legal research or enter the judiciary in due course.

The institute has a mandate to make law and legal process efficient instrument of social development, to develop in students and research scholars a sense of responsibility to serve the society in the field of law , in regards to advocacy, legal services, legislation, law reforms and the like. To advance and disseminate learning and knowledge of law and legal process and their role in national development.

About the Workshop :

The ICAFI Law School, ICAFI University Tripura organizing this workshop in collaboration with The National Law School of India University Bangalore on 29th, 30th and 31st March 2019 in the ICAFI University Campus. This workshop is aimed at to discuss various aspects of cyber crimes and cyber laws and the problem of law making and policy initiatives in this regards.

This issue has tremendous significance in recent time as the entire world is connected in cyber space and accessible at any point of time and place. A strong regulatory framework is the demand of the time to control this phenomenon which has transnational jurisdiction. Each and every aspect of the subject will be analyzed thoroughly to educate the participants about how to deal with the issue in various level of academic exercise.

About the Subject :

Technology is the driving force for development. There are many ways in which it can be used to protect individuals and society. But technology has always been a double-edged sword. The force of evil will not hesitate to exploits these emerging technologies and deploy them against the masses. The more we plug our devices and our lives into the global informational grid, whether via mobile phones, social networks, elevators, or self-driving cars, the more vulnerable we become to those who know how the underlying technologies work and how to exploit them to their advantage and to the detriment to the common man. The member of the general public are to be armed with the legal framework to protect themselves, their families, their communities against the horde of emerging threats that will be here much more quickly than anticipated. Limiting this knowledge to 'insiders' working in Government, security and Silicon Valley, won't serve the greater objective.

Due to the development of Information Technology, people are increasing living in a borderless world. Bits and bytes flow freely from one country to the next without any border guards, immigration controls, or custom declarations to slow their transit. Each day people are plugging more and more of their daily lives into the global information grid without pausing to ask what it all means. Today anybody with good or ill intent can virtually travel at the speed of light halfway around the planet. For criminal this technology has been a boon, as they hop from one country to the next virtually hacking their way across the globe. Criminals have also learned how to protect themselves from being tracked online. A smart hacker would never directly initiate an attack against a Bank in Brazil from his own apartment in France. Instead he would route his attack from one compromised network to another, from France to Turkey, to Saudi Arabia towards his ultimate target in Brazil. This ability to country-hop, one of the internet's greatest strengths, creates enormous jurisdictional and administrative problems for the police and is one of the main reasons why cybercrime investigation is so challenging and often feckless.

In this brave new world, the human beings are taken out of the loop and have entrusted the backbone of the civilization to machines. Not only the personal and work computer deeply enmeshed with the internet, but so too are all of the critical infrastructures upon which our modern society depends. The electricity grid, gas pipelines, air traffic control, the stock market, drinking water, street lights, hospitals and sanitation systems are all depends on technology and the internet to function. The Information Technology society of the twenty first century cannot be built in the poor foundation of legal framework. Therefore the aim of the workshop is to develop the understanding of the existing legal framework relating to Cyber Crimes and Cyber Laws to mould the speed of the of the cyber space from rashness to development.

Who can Attend :

This workshop is aimed at Academicians, Research Scholars, Professionals, Policy Makers and Students (both at Undergraduate and Postgraduate levels).
